

Meet the Students

MARC LABATA

Marc's project aims to make green hydrogen cheaper so we can get rid of fossil fuels like gasoline and achieve net-zero emissions by 2050.

NEGAR SEYEDHASSANTEHRANI

Investigates how the aging and the cytotoxic insult including radiotherapy and chemotherapy result in structural and molecular changes in the thymus microenvironment as a critical organ in the immune system.

KAREN MOHAMMADTABAR

Mechanical Engineering

What is Grad Slam?

Watch Grad Slam Finals from 2-5 on April 8th!

The systemwide competition showcases and awards the best three-minute research presentations by graduate students. This competition not only highlights the excellence, importance and relevance of graduate scholars and their research, but it is also designed to increase graduate students' communication skills and their capacity to effectively present their work with poise and confidence.
